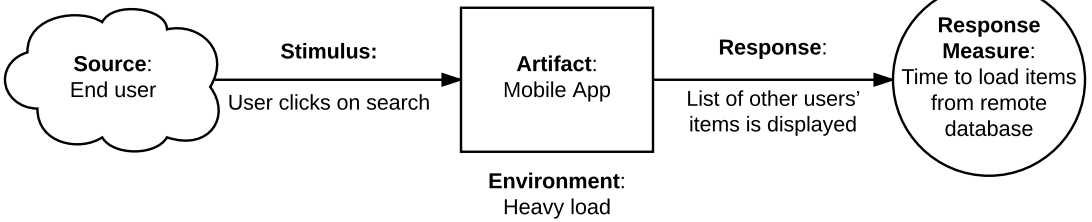
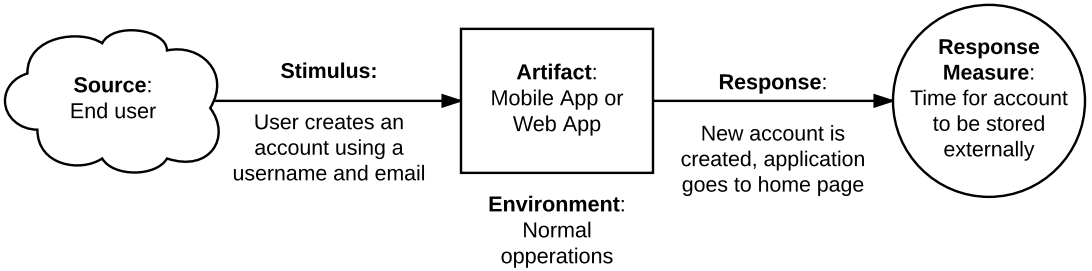
Concrete Quality Attribute Scenarios

1.



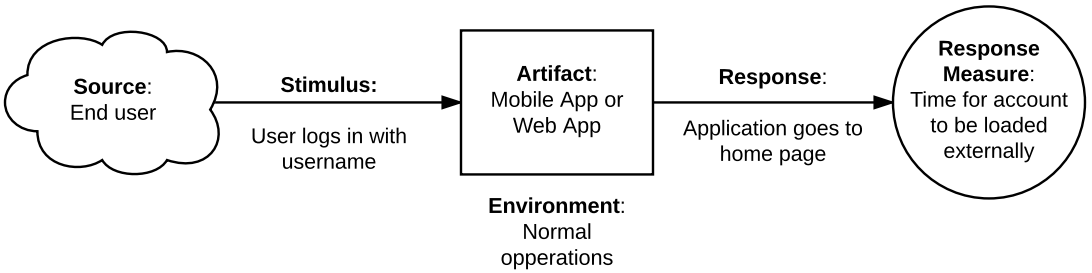
it`s risk:
* Response time varies more than 1s which is recommended by ASR

2.



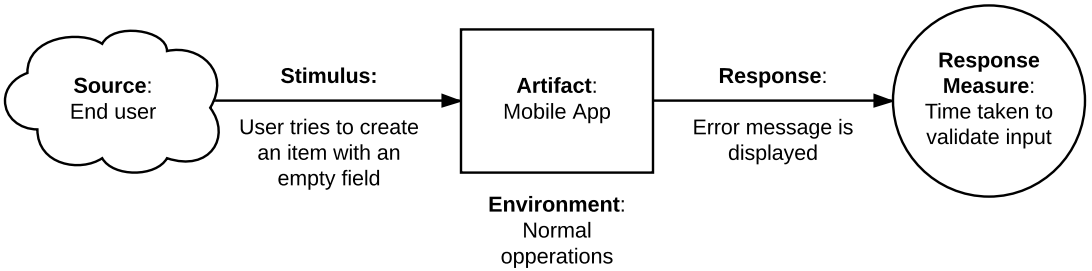
It`s risk:
* No requirement of password for security
* No verify legitime e-mail account

3.



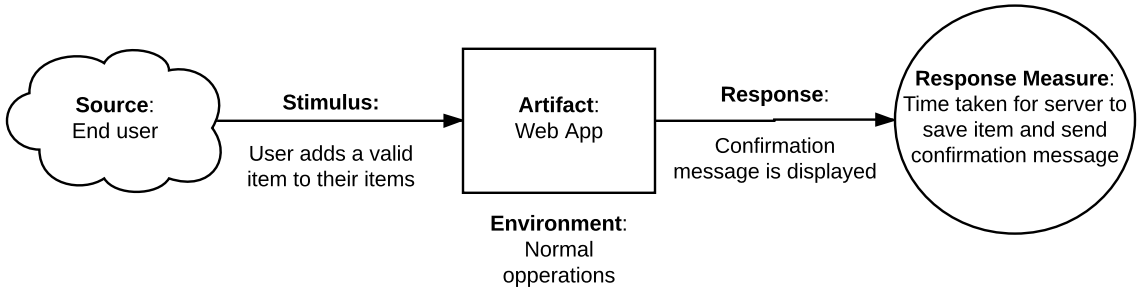
it`s tradeoff:
* Just login with username generates fast but account insecuret

4.



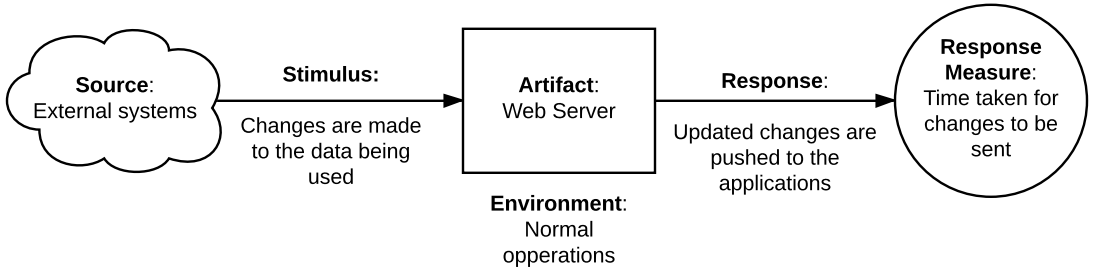
it`s non-risk:
* The system treat the error with message

5.



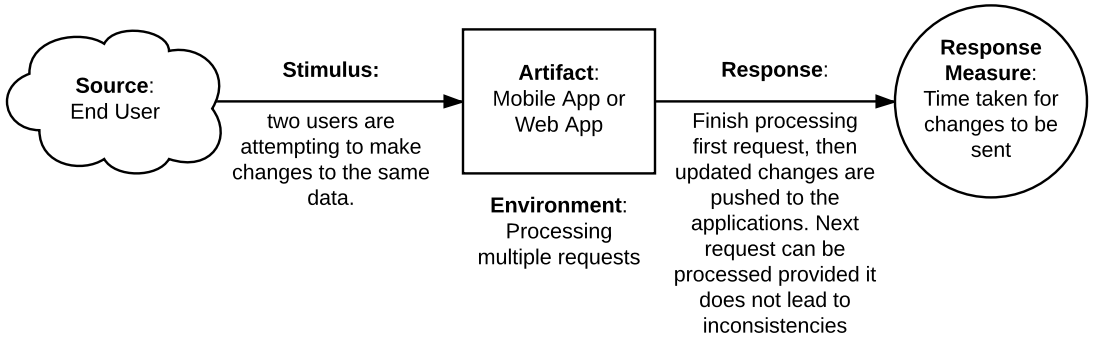
It`s non-risk:
* The system treat the process with one response sucefull

6.



It`s sensitivy point:
* If data sync not used correct, the user can utility and view stale data.

7.



It`s non-risk:
* The system processes one request at a time, which makes it possible to update the data before the next request.
* This construction makes a data collision impossible.
